

RTE Strategic Map

RTE information in one place

tieto

Activities since last round table:

1. RTE working group with participants from private and public sector
2. RTE video
3. RTE webpage under Estonian Ministry of Economic Affairs and Communications webpage - realtimeeconomy.ee
4. Roadmap for RTE and MyData for Europe from Bo Harald
5. Communication with European Commission
6. Searching for real cases in RTE for piloting.
7. RTE dissemination
8. Finding new funding possibilities for RTE projects

Strategic map – 4 perspectives

- Financial
- Customer
- Internal business process
- **Learning and growth**

The need – why it's needed!

- Lack of information and knowledge sharing between countries
- No good place to share what different projects are about

It builds great value:

- Common understanding and standards
- Finding the information easily
- Information sharing
- Connections and contacts
- Unified picture

The goal of RTE strategic map

- Always updated RTE info from one place
- Common understanding
- Address different target groups
- Discover relations
- Evaluate potential and measure goals
- Avoid overlapping
- Find new project ideas

The process

- The tool is up and running
- Pilot information is visible
- Gather ideas and inputs (second day workshop)
- Information gathering

For example

- what has been done in their interested field (for example in e-invoicing);
- are there any public and/or private sector projects within interested field;
- Is there any analysing work done on the interested topics;
- who is the contact for this concrete project;
- how big is the estimated impact to the interested field;
- etc..

Everyone's contribution is needed!

Give YOUR input and ideas tomorrow!

NB! Call for action! Please contact us and send your project information together with new ideas for the map.
